Applicant

EISAI CO., LTD. et al

Transmittal of the translation to the applicant.

The International Bureau transmits herewith a copy of the English translation made by the International Bureau of the international preliminary examination report established by the International Preliminary Examining Authority.

2. Transmittal of the copy of the translation to the elected Offices.

The International Bureau notifies the applicant that copies of that translation have been transmitted to the following elected Offices requiring such translation:

AZ, CA, CH, CN, CO, EP, GH, KG, KR, MK, MZ, RO, RU, TM

The following elected Offices, having waived the requirement for such a transmittal at this time, will receive copies of that translation from the International Bureau only upon their request:

AE, AG, AL, AM, AP, AT, AU, BA, BB, BG, BR, BY, BZ, CR, CU, CZ, DE, DK, DM, DZ, EA, EC, EE, ES, FI, GB, GD, GE, GM, HR, HU, ID, IL, IN, IS, JP, KE, KZ, LC, LK, LR, LS, LT, LU, LV, MA, MD, MG, MN, MW, MX, NI, NO, NZ, OA, OM, PG, PH, PL, PT, SC, SD, SE, SG, SK, SL, TJ, TN, TR, TT, TZ, UA, UG, US, UZ, VC, VN, YU, ZA, ZM, ZW

3. Reminder regarding translation into (one of) the official language(s) of the elected Office(s).

The applicant is reminded that, where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report.

It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned (Rule 74.1). See Volume II of the PCT Applicant's Guide for further details.

Claims 1-11 and 16

The inventions of claims 1-11 and 16 lack an inventive step with respect to document 1 cited in the international search report.

Document 1 states that if a preproinsulin gene is inserted into adipose cells, they can correct hyperglycemia in a diabetes mouse model. In addition, as described in documents 2 and 3, the ex vivo gene therapy method, in which a desired gene is inserted into cells removed from patients and then the cells containing that gene are returned to the body, is well known. Moreover, document 4 describes a method for inserting a gene into primarily cultured adipose cells. Therefore, it is obvious to persons skilled in the art to introduce a desired gene such as the preproinsulin gene, etc., into primarily cultured adipose cells as described in document 4 and then attempt to use the adipose cells containing that gene in gene therapy. Furthermore, this examination finds that no particularly outstanding effect is obtained by adopting the constitution of the inventions of claims 1-11 and 16.
